## EXPERIENCE

### NIKE, Beaverton, Oregon – SW QA Engineer

March 2018 - PRESENT

Intern as a software/platform engineer to help create products for Nike internal use. Used Postman to automate data entry/validation. Created a web app to gather data from the different teams to assist with DevOps. This tool reduces the amount of DevOps tickets, thus allowing engineers to focus more on feature tickets.

## Personal Projects

**HomeHub (React)** - I created an open source web app that would help those who live together manage their expenses, share events, and message each other in real time. The back end was written in **Node JS** and I used Google's real-time database, **Firebase**. This is an on going project.

**To-Do (React)** - Created a 'To-do' web application. This application allows a user to enter in different list options, and the web application has a button the user can click that will randomly choose a task for the user to do.

## EDUCATION

### Portland State University, Portland, OR — M.S. Computer Science

March 2017- June 2020

Currently taking courses for acceptance into the PSU master's program for Computer Science.

### Oregon State University, Corvallis, OR— B.S. *Public Health*

September 2011 - September 2015

## LANGUAGES

Javascript  
Java  
Swift  
Python  
C/C++

## Frameworks

React/Redux  
NodeJs  
Spring

## Software

Git  
Gradle  
Docker  
Puppet  
Jenkins  
AWS

## Volunteer

### PSU - Computer Action Team

Training to learn more about the College of Engineering and Computer Science computer systems. Work to become better IT and system administrators for the students in the college.

### Oscar Mike Foundation

Assist with the planning of events to bring disabled US veterans *On The Move*.
